

# Brunton STALKER V6 'Clubman' Prototype ( Golden oldie page!! )

To keep development costs low, the entire prototype, patterns and molds, as well as the jigs and fixtures to produce chassis and parts..were built in a 12' X 18' carport!!!!

We are assembling the prototype "part time" as if it were a kit, and taking pics, making notes etc for the Building Instructions..We got the chassis off the jig, May 15th, and, as can be seen in the above pictures have finished all the aluminum, and paintwork, and fitted the windshield..

THE LEFT SIDE TUNNEL IS REMOVABLE TO ACCESS THE CLUTCH CYLINDER AND SPEEDOMETER SENSOR

Now this is an enthusiastic and tolerant wife!!!

Notice the deft "knee, heel and toe" technique for clamping the part to the "Persian" !!

Here are the results of her livingroom "swirling"!!! 

In keeping with the All American concept, the Stalker prototype stood on it's own for the first time on...July 4...What a thrill!!

We are in 'full swing' producing body parts/chassis at the moment ( The customer comes first!!)

For up to date prototype pics, and news..click "stalkings"below
