

Myope5's

Tumbling "E" eyechart

Identify the orientation of each tumbling E. Left, Right, Up, Down
You may also say "3" "E" "W" "M"

When printing the eyechart, make sure to print at 100%

The 20/300 should measure 5.2" the 20/200 3.45" the 20/120 2.05"

Tip: if your vision isnt so bad, you may skip the printing of the top 20/300 line

Stand back 20 feet or 6 meters.

You must read more than 2/3 of a particular line for it to count

If you make out almost 2/3 of the 20/20 line, you are still 20/24

Absolutely no squinting nor reading the eyechart outdoor in broad daylight
this will give inaccurate results due to "pinhole effect"

There are 9, 11, 14, 20, 38 Tumbling "E" on the last 5 lines

This chart took a while to make. Hope you enjoy finding out where your vision currently stands with/without correction. Hope you like the quality that went into this eyechart. I took great care to make the spacing even and equal and the letters of the correct snellen size
