

The basic alt-# keyboard map.

You may print this out for your use, and click the back button on your browser to return to resources.

It is often a pain when doing research to try and spell European or other non-US names and terms containing diacritical markings (i.e. Górecki, Blüme, Frédérick François). Most people know about the 'alt-numberpad' advantage, but many don't. It's a pain to have to change fonts in mid-word and looks bad to have the diacritics penned in on the page (imagine a discussion on the Händel v. Handel debate). Note: There are many different combinations to each character. My alt-map will differ from others. (This alt-map is from the Corel "GALLERY™ Magic" User's Guide, © 1997 Corel Corp., Ltd.)

To get these characters in any font*, follow these 3 steps:

1. hold down the 'Alt' key,
2. type in the appropriate number on the number pad (on the right side of the keyboard), and
3. release the 'Alt' key.

* These have been tested with most fonts containing basic U.S. character sets. Multinational and phonetic fonts may not have these included, as well as iconographic fonts (dingbats, mathematic), and certain user-defined fonts. Also, I have noticed a bug which may not allow all the special characters to appear in all web browsers. If you have problems with the online version, you can download a copy in Adobe Acrobat format. Just direct your browser to "http://www.angelfire.com/freak/musicresources/altmap.pdf" and follow the instructions to download.
