

Ranged Weapons

This is the first section of weapons rules for use with the [Gemini-ARAP ruleset](#), updated for the 2.4 version. I probably will not find time to update the mêlée weapon and grenade pages in a similar fashion. Use the rules here as a guide for weapons on those pages.

The table of contents is at the end of the document.

While this is an extensive list, it does not attempt to list every weapon in the 40K universe. The format of weapon profiles has not changed since 3rd edition. The majority of weapon profiles have not differed between editions. Adapting information from the Forgeworld books or other sources should not be a problem. 8th edition reintroduced a damage characteristic and reverted to a save modifier as in WH40K:RT 1st edition, while confusingly keeping the name “AP”.

To make things clearer some of the more esoterically-named special rules have been converted into simple descriptions of the relevant effect. Most of the weapons with longer rulesets have not been included here. See the relevant codex or copy of White Dwarf if you wish to use these. As the 8th edition weapons profiles show, there is room for further simplification. You are welcome to use 8th edition weapons with the 2.4 rules if you wish. Note that 8th edition profiles no longer uses templates or markers, so the rate of fire of weapons that used these has been changed from earlier editions to allow them to make multiple hits.

To compensate for some of the differences in Gemini-ARAP rules some of the heavy weapon profiles have been changed. The protocol used was as follows:

- Weapons with an area effect were not changed.
- Weapons of Strength 7 or higher were not changed.
- Weapons of a “Heavy 1” or “Heavy 10+” type were not changed.
- Weapons with a special target effect were generally not changed.

The remaining heavy weapons include commonplace weapons such as the heavy bolter or assault cannon. The number of shots such weapons can take in a shooting action is doubled.

Basic Rules

- Firing a **Rapid Fire** weapon its allowed number of times up to its full range is *One Action Point*.
- Firing a **Rapid Fire** weapon once more than its allowed number of times to a range of up to half-range is *One Action Point*.
- Firing an **Assault** weapon its allowed number of times up to its full range is *One Action Point*.
- Firing a **Pistol** once to a range of up to 12" (or its maximum range if different) is *One Action Point*.
- A **Salvo** n1/n2 weapon can fire n1 times to half-range for *One Action Point*.

- A **Salvo** n1/n2 weapon can fire n2 times to full-range for *Two Action Points*.
- Firing a **Heavy** or **Slow** weapon its allowed number of times up to its full range is *Two Action Points*.
- A **Heavy, Slow, Ordinance** or **Primary** weapon cannot fire more than its allowed number of times in a turn so additional actions may not be used for firing.
- Firing an **Ordinance** or **Primary** weapon in direct fire is *Two Action Points*.
- Firing an **Ordinance** or **Primary** weapon in direct fire is *Three Action Points*.
- Dropping a **Bomb** is *One Action Point*.
- Throwing a **grenade** is *One Action Point*.

If no number is given the allowed number of shots should be taken to be one. A “Rapid Fire” weapon can therefore fire once for one Action, or twice if the range is 12" or less. A “Rapid Fire 2” weapon can fire twice, or three times at 12" or less.

Assault Weapons can be fired while charging.

Slow weapons have the same rules as Heavy weapons but are not physically heavy. The distinction may be significant in situations such as climbing or swimming.

Ordinance weapons and Primary Weapons have an armour penetration of S+D6/D6↑. Roll two D6 and use the score of the higher.

Primary Weapons are mounted on Super Heavy vehicles or fixed installations.

Weapons with “Bomb” as a type are dropped by flying vehicles or creatures. They are treated as area weapons with the distinction that the counter/ marker centre is initially placed anywhere under the flight path that the dropper moved along that turn. Scatter is then worked out as normal.

Damage

The main difference between these tables and those in earlier, official codices is that I have added 8th edition-style Damage values. This makes the weapons more practical against multi-wound creatures and allows the Toughness characteristics for vehicles to be used. Note that Damage is per hit. Three hits with a D2 weapon will affect no more than three targets. The six wounds cannot be divided between four or more targets. Excess damage is lost. I have used 8th edition damage values where they are known. Some of the weapons in these tables are not in 8th edition so you may encounter some “oddities”.

Blast and Large Blast

The terms “Blast”, “Large Blast” etc are including in the notes to draw attention to the fact that the weapon has an effect area. Blast designates weapons with a 3" diameter effect area or smaller. A Large Blast is 5" diameter, a Massive Blast 7" and an Apocalyptic Blast 10". Apocalyptic Mega-Blast weapons use the 10" marker but divide it into three zones. The first strength and AP given are applied to the innermost 5" zone and the third to

the outer ring. “Apocalyptic Barrage” weapons use a cloverleaf template. See official rulebooks on how to use these. If you do not have one of these or prefer treat these weapons as multiple battery instead.

If you lack a marker measure the appropriate radius from the impact point.

Multiple Battery

Multiple barrage rules are renamed “multiple battery” in Gemini-ARAP rules. Some weapons such as the thudd gun always use multiple battery fire rules. Others only use these rules when firing as barrage weapons, or when firing as part of a battery of multiple weapons.

Take a counter for each shot that will be fired. Use the normal scatter rules to determine the position of the first counter. For each of the other counters roll for scatter direction. If the counter scatters it is placed at the correct orientation relative to first counter. The distance between counters is equal to the diameter of the relevant effect marker. A light thudd gun uses 2" markers so each counter will be 2" away from another. If a “hit” was scored while rolling for scatter the player may place the counter anywhere they want as long as it is a marker diameter away from the first counter or another counter that has already been placed. Hold the marker with its centre over each counter to determine who has been hit.

Barrage

Barrage weapons can use high trajectory or indirect fire and may even be fired from a location off table.

All barrage fire uses Guess-range.

If the shooter can see the target the shooter’s BS is subtracted from the Scatter distance. Shots that scatter deviate $2D6 - (BS + \text{Modifiers})$ ". The difference between direct fire and barrage fire is the marker is initially placed on the guessed range, not on the intended target.

Many barrage fire weapons have a minimum range for barrage fire and cannot use barrage fire against targets closer than this range. High velocity projectile weapons such as missile launchers and heavy autocannon have a minimum range of 36" when using barrage fire. Weapons that do not have a minimum range that fire at 6" or less may have their shots deviate more than half the range to the target.

Barrage Fire from beyond 24" range requires a Pinning test if it causes a casualty

If there is no Line of Sight to the target use Hit/Scatter dice and $2D6$ " for deviation. Hits from any Barrage fire weapons not in Line of Sight require a Pinning test if they cause a casualty.

Ordinance

For direct fire of an Ordinance weapon the marker is placed on the intended target then scatter dice rolled and scattered shots moved $2D6 - (BS + \text{Modifiers})$ ". This applies to Ordinance weapons fired from fixed emplacements or very large vehicles such as titans, juggernauts and giganths. Direct fire of an Ordinance weapon costs 2 actions.

Direct fire with Ordinance weapons from normal sized vehicles scatter **R3D6P2↑**", modified by BS and other modifiers. This means you roll three D6 and take the score of the highest two for deviation distance. Direct fire of an Ordinance weapon from such a vehicle costs 2 actions.

Gemini-ARAP WH40K Rules 2.4 V.4

Barrage fire is made as for other Area Weapons. Barrage Ordinance fire can only be made from stationary vehicles, artillery pieces or fixed emplacements. The marker starts at the guessed range, not on the intended target. Scatter is modified by BS if the target is within line of sight so Scatter is $2D6 - (BS + \text{Modifiers})$ ". Indirect fire of an Ordinance weapon costs 3 actions.

If there is no Line of Sight barrage fire with ordinance weapons is made only with hit/scatter dice and $2D6$ " scatter distance. If there is a Forward Observer who can observe the fall of the first shot then BS can be used for the second and following salvos.

Most Ordinance weapons use the 5" diameter marker with a $\frac{1}{4}$ " diameter central hole. Some use larger markers.

When determining damage against vehicles from Ordinance weapons two D6 are rolled and the value of the highest scoring one is added to the weapon strength to calculate if armour is breached.

Example: *The weapon has a Strength of 8 and the player rolls two dice scoring a 1 and a 4. Armour is compared to a value of 12 (8 + 4)*

Full force of an Ordinance weapon is only applied against a vehicle if the centre of the template was located on the vehicle. If the vehicle did not receive a direct hit then the weapon strength is halved (round down). In the above example the vehicle would only take test against an 8 (4+4). Crews of Vehicles that take an Immobilizing or Armament destroying hit from an Ordinance weapon also take a Crew Stunned result.

Infantry and exposed passengers and crew always take hits from Ordinance weapons at full weapon strength. Hits from Ordinance weapons inflict two Suppression Points on a hit unit rather than one.

If the centre of an Ordinance marker hits a monstrous creature make D3 rolls to wound rather than just one and apply all unsaved wounds scored. For daemonic monstrous creatures (including Eldar Avatars) the GM may decide that only one wound can be scored.

Special Weapon Rules

Armourbane.	Armour Penetration at all ranges is $S+2D6$.
Barrage	Weapon is capable of high trajectory and indirect fire modes. Weapons with "Barrage Only" cannot fire directly.
Bow	Arrows and crossbow bolts are not very effective against heavy armour. Targets with an armour save of 4+ or better get a 2+ save against arrows. This rule does not apply to explosive arrows, which are S4 AP5.
Combi-Weapon	With the exception of combi-bolters, combi-weapons consist of two weapons of different types. Hence they have two profiles. Use one or both profiles. If using both all shots with either weapon are an additional -1 to hit.
Concussive	Model that takes one or more unsaved wounds from a concussive weapon is at Initiative 1 until end of following mêlée phase.

Gemini-ARAP WH40K Rules 2.4 V.4

Destroyer	Weapons with a Strength of D ignore the target's Toughness. Instead roll a D6 to-wound. A roll of 1 leaves the model unscathed. A roll of 2-5 causes the target to lose D3 wounds, D3 Hull points or take D3 damage points. If a 6 is rolled the model takes D6+6 wounds, damage points or loses D6+6 hull points.
Dragonfire Bolt	Boltgun special ammunition: Ignores Cover.
Entangling	Affects targets hit or within the effect area but not necessarily wounded. If the unit/vehicle/creature moves in its next turn it must take a dangerous terrain test. As well as physical entanglement, this may also apply to effects such as the tremors from a subterranean burst from a Thunderstrike cannon so will also affect skimmers, floating creatures near the ground and so forth.
Fleshbane	Always wounds on a 2+, irrespective of Toughness. No effect on vehicles, robots or buildings.
Gets Hot!	If a 6 to-hit is rolled the firer takes a wound. Armour and Invulnerable saves may be taken against this. For area weapons that Get Hot! an additional dice is rolled for each shot to see if a wound is caused. Twin-linked weapons and other weapons that can re-roll "to-hit" rolls may re-roll the 6 and only take a wound if a 6 is rolled again.
Graviton	The roll to-wound is equal to the target's armour save, minimum 6. Against a vehicle roll a D6. A roll of 6 causes an Immobilized result and removes a Hull point. Against a building, a section takes D6 damage points on a roll of 6. If the shooter keeps firing at the same building section it takes D6 damage points in the second shooting action on a 5+, is damaged on a 4+ in the third action and so on to a maximum of 2+.
Hallucinogenic	If a unit takes one or more hits it must take a Pinning test. If the test is failed it is pinned and takes one automatic random wound with no armour save. Alternately use the table in the Grenades chapter .
Haywire	If a vehicle or dreadnought is hit by a haywire weapon roll a D6. 1: No effect. 2-5: Glancing Hit. 6: Penetrating Hit. A robot hit by a haywire weapon takes a Damage Point on the roll of a 4 or less.
Hellfire Round.	Constructed from a hollow crystal filled with caustic mutagenic acid and neuro-toxins, Hellfire ammunition always wounds organic targets on a 2+ but is Strength 1 against other targets.
Ignores Cover	Ignores the -1 or -2 modifier for soft or hard cover. Area and Template weapons with this rule that are fired against cover make no dice rolls to see if a figure escapes being hit due to cover.
Instant Death	An unsaved wound removes all of the target's remaining wounds. The target is out of action for the remainder of the game.
Interceptor	Can fire on one arriving enemy reserve in line of sight and range as a reaction.

Gemini-ARAP WH40K Rules 2.4 V.4

Kraken Bolt.	Boltgun special ammunition: AP4, Increases pistol range by +3" and boltgun range by +6".
Lance	Treats Armour Values of greater than 12 as 12.
Laser	Laser beams travel at the speed of light so laser weapons can ignore any negative modifiers for target speed. On the other hand, lasers are affected by battlefield conditions such as smoke. Lasers with a Strength less than 6 cannot fire through smoke at all. Lasers with a Strength of 6 or more have their Strength reduced by 2 if firing through smoke.
Low Signature	Some weapons have a firing signature that allows them to be fired by hidden models without revealing the shooter's position.
Master Crafted	May re-roll one failed to-hit roll.
Melta	If final range to the target is less than half the weapon's maximum range roll S+2D6 for Armour Penetration instead of S+D6. At half range or less against targets with Toughness meltas are R2D6P1↑. Roll two dice for each "to wound" roll and discard the lower scoring one.
Multiple Battery.	Weapon uses the multiple battery rules when firing high trajectory or indirectly. Some weapons use these rules for direct fire too. Some weapons only use multiple battery if firing as part of a battery.
Never Gets Hot!	Hot plasma weapons mounted on vehicles, dreadnoughts and war-robots take advantage of the machine's cooling systems so are not subject to the Gets Hot! Rule. Some plasma weapons, notably those of Eldar manufacture use more advanced technology than is used in the more commonly encountered plasma weapons and are also never subject to the Gets Hot! rule. Such weapons have "Never Gets Hot!" in their notes section as a reminder.
Off-Table	Indicates a weapon that is fired from orbit, a high altitude aircraft or from a remote location. Using such a weapon requires a successful reserves roll .
One Shot/ One Use Only.	A model may use a weapon, ability or device with this property only once during a game.
Pinning	A unit that takes one or more unsaved wounds from a weapon with this rule must make a successful leadership test or becomes pinned. A pinned unit spends its next turn taking two less actions than it rolls. A unit may have to take multiple pinning tests in a turn but only tests once for each unit firing upon them.
Poisoned (N+)	Causes a wound on a roll of n+, irrespective of Toughness. Only affects creatures vulnerable to poison. In mêlée may re-roll failed to-wound rolls if strength of user or weapon is greater than the target's toughness.

Gemini-ARAP WH40K Rules 2.4 V.4

Psi-Shock	Some weapons or abilities specifically affect psykers and warp-creatures such as daemons. Psi-shock automatically causes a wound, no armour save if it hits a psyker, daemon, warp-creature or any creature with psi-based abilities. If the victim survives they also lose D6 psi-points for the remainder of the battle. Any psychic powers being employed in the area, through it or into it are instantly negated, including protective psychic (but not daemonic) auras
Quad-Mount	Weapons in a quad mounting have the same profile as a single weapon, but fire four times as many shots. Note that some quad-mounts are treated as a pair of twin-linked weapons instead.
Recharges	A weapon with the Recharges characteristic cannot fire on two consecutive turns or actions. If the weapon was fired as a reaction it cannot fire in the player's following turn. The weapon will need one or more turns to recharge or reload after firing and this is represented by the use of recharge counters. Immediately after firing the appropriate number of counters is placed by the model or on its record card. A weapon cannot fire while it has counters beside it. At the end of his turn a player can remove one charge counter from beside each figure providing the counter(s) were not placed in that turn. Recharge counters are removed even if that unit performed no actions in that turn. The Recharge characteristic is followed by a number in brackets, indicating the number of turns it must miss before firing again. If his number is absent assume it to be 1.
Reloads	Reloads works in much the same way as Recharges, the difference being that removing a Reload counter requires an action. Reloading costs one action point per counter.
Rending	A to-wound roll of 6 automatically inflicts a wound, regardless of target toughness. This wound is resolved at AP2. Against a vehicle an Armour Penetration roll of 6 allows D3 to be added to the total. Armour penetration effects are at the weapon's usual AP value, not AP2.
Shield Breaker Round.	No Invulnerable saves possible.
Shotgun	Shotguns firing shot or gas are +1 to hit at half range or less. If a hit is rolled when firing gas or shot any model within a 1" radius of the target is also hit. There is no armour save against gas but it has no effect on models wearing breathing equipment, robots, sealed vehicles etc.
Single-Handed	A basic weapon that can be fired using just one hand, freeing the other hand for other things. Unlike a pistol category weapon it cannot be used in mêlée. Also used for pistol-sized weapons that cannot be used in mêlée. Examples include the handbow.

Skyfire	“Skyfire” indicates the weapon has superior capability against flying targets. The weapon fires against airborne targets at its full BS and ignores modifiers for target speed. See AA mounts .
Sniper	On roll to hit of 1 the shooter may choose which enemy unit member takes the wound. Wounds on a 4+. A to-wound roll of 6 is AP2. If no strength is given in the profile the weapon is Strength 4 against vehicles and other targets with an Armour Value. Weapons with the Sniper characteristic may also cause Pinning if they cause a casualty and are fired from beyond 12".
Soul Blaze	If one or more unsaved wounds are taken a counter is placed by the unit. At the end of each turn roll a D6. On a 3 or less the counter is removed. On a 4+ the unit takes D3 S4 AP5 hits. A unit may only have one counter.
Turbo-Penetrator	Inflicts D3 wounds rather than one. Armour Penetration 10+D6.
Twin-Linked	Twin-linked weapons have the option of re-rolling their to-hit scores. Twin-linked area weapons reroll their scatter distance. Twin-linked template and torrent weapons are fired as normal but increase their range by 6". Twin-linked template weapons are therefore torrent weapons.
Twin-Mount	Not to be confused with twin-linked. Weapons in a twin mounting have the same profile as a single weapon, but fire twice as many shots.
Vengeance Bolt	Boltgun special ammunition: AP3, Gets Hot! Decreases pistol range by 3" and boltgun by 6".
Vortex	See the Vortex Grenade section in the Grenades Chapter .

Handbow

Handbows are pistol crossbows they are found in both primitive and advanced cultures. This category also represents spearguns and similar weapons. Handbows cannot be used in close combat but only need one hand to fire during the shooting phase, freeing the other hand to carry items or use a shield. Handbows made with hi-tech materials are popular with some criminals and are used for both assassination and burglary. Many Handbows are designed to pass through the more common forms of weapon detector and use bolts made from plastic or wood with glass heads. Bolts are sometimes poisoned. Handbows can be used to launch grappling hooks or their equivalent.

Any Shot with a Handbow has a 50% (4+) chance of allowing the shooter to remain hidden.

Targets with an armour save of 4+ or better get a 2+ save against handbow bolts. This rule does not apply to explosive arrows, which are S4 AP5.

Webber

Webpistols only affect the individuals that they hit. Heavy webbers hit all models fully covered by a 2" radius marker. Partially covered models are hit on a 4+. *(3 or less in 2.4 rules)*

No roll against Strength/Toughness or Armour Saving rolls are made against webbers. Models hit are entangled. An entangled model cannot move, shoot or defend themselves in close combat but can use psychic powers. A model may attempt to break free by adding their strength to a D6 roll. If this value equals or exceed 9 the model is free. A failure causes the web to contract inflicting one wound. Zombies will always attempt to break free and have their usual 4+ roll to ignore any wounds from failed attempts so a trapped zombie may make numerous attempts to break free.

Models equipped with webbers usually carry web-solvent. Some web pistols have a built-in spray unit. Some police and arbites not equipped with webbers may also carry solvent and it may be found in the hands of criminals and other individuals. Models equipped with web-solvent may attempt to free trapped models. To do this they must be within 2" and using solvent is a shooting action instead of firing a weapon. A webbed individual cannot free themselves with web-solvent since the strands are wrapped too tight.

Heavy webbers have a big enough effect area that they can immobilize a vehicle. As well as physically binding the vehicle to the ground the strands may also clog engine intakes, gum doors up, bind up running gear or have various other effects. Hitting a vehicle with a heavy webber is fairly easy so is determined by vehicle speed rather than firer's BS.

Vehicle Speed.	0-4"	4-8"	8-12"	12-16"	16"+
To Hit	3+	4+	5+	6	Miss.

On a miss the vehicle sloughs off the web before it sets, the chemical just forms a large blob or some other result.

A webbed vehicle is stopped immediately. Occupants cannot leave, operate weapons or fire out. At the start of each subsequent turn they can roll on the Webbed Vehicle Escape Chart.

Webbed Vehicle Escape Chart

- 1 Trapped and engine burns out. A subsequent "Freed" result allows the occupants to leave but the vehicle is permanently immobilized.
- 2 – 3 Remain trapped. Try again next turn.
- 4 Vehicle unable to move but one weapon freed and can fire. On an unarmed vehicle a hatch or window has been opened enough for one occupant to shoot out.

5 – 6 Freed. Vehicle breaks free of web and can move in its movement phase. If the vehicle was immobilized for any reason while webbed occupants can now leave the vehicle.

Quick Reference Weapons

Weapons	Effective Range (")	Type	Strength	AP	Damage	Area (dia.)	Notes
Assault Cannon	24	Heavy 8	6	4	1	1	Rending
