WELCOME

Earning an A+ Certification means that you possess the knowledge, skills, and customer relations skills essential for a successful computer service technician, as defined by experts from companies across the industry. The exams cover a broad range of hardware and software technologies, but are not related to any vendor-specific products.

To become certified, you must pass two test modules - the Core and one of two other specialties, either the Microsoft Windows/DOS module or the Macintosh module.

Candidates who pass the two computer-based test modules become certified, demonstrating basic knowledge of configuring, installing, diagnosing, repairing, upgrading, and maintaining microcomputers and associated technologies.

A+ MEMORY FLASHERS prepares Students & Professionals to take the A+ Certification exams. The two Memory Flasher modules contain over 900 questions built around the subject areas covered on the actual exams.

For technical assistance, information about the CTIA and the A+ Certification Program, you can email me at martind@camalott.com, write me at BOX 7733, Abilene TX 79608, and/or visit my web site for the latest FAQs concerning the study guide. I will be more than happy to answer your questions.
