Neuropsychotherapy After Neurologic Impairment: ReBuilding the Shattered Self

Presented at the 3rd Annual Coalition of Clinical Practitioners in Neuropsychology Miami, 2002
Michael F. Martelli, Ph.D
Concussion Care Centre of Virginia, and Tree of Life 10120 West Broad Street, Suites G - I Glen Allen (Richmond), Virginia 23060

Myths of Recovery and Adjustment Following Neurologic Insult or Illness

- If the Structure Tests say they Can, They Will
- If the Structure Tests say the Can’t, They Won’t

Purpose of Talk

- Offer a Model and Methodology of Neurorehabilitation (Holistic Habit Rehabilitation, Martelli (in press)) that:
  - Reduces the overwhelming complexity of trying to do psychotherapy with persons with neurologic disorders...
  - Integrates psychotherapy as Necessary to the Rehab Process
  - Simplifies both the combined processes of accomplishing the goals of psychotherapy and rehabilitation, and the methods
  - Issues from: (a) the "automatic learning" and "errorless learning" literature and recent evidence of skills relearning; (b) a task analytic examination of acquisition of relevant habits as a model of skills retraining; (c) analysis of developmental, characterologic, organic and situational obstacles to strategy utilization; and (d) techniques for promoting rehabilitative strategy use (adapting techniques to fit individual inherent & naturalistic reinforcers, highlight relationships to functional goals, utilize social networks, employ a simple and appealing cognitive attitudinal system and set of procedures).

REHABILITATION

The Systematic Process of:

- Removing Obstacles to Independence
- Accessing Opportunities for Stepwise Achievements (Of Desired Goals) in the areas of Love, Work and Play!
- Changing Destiny!
Initial Evidence of Biopsychosocial Influences:
TBI VULNERABILITY FACTORS

- Accident Type
- Length of PTA
- Premorbid Neurologic
- Premorbid Psychiatric
- Premorbid IQ
- Victimization (Perception)
- Collateral Injuries
- Marital Relationship

Predictors of Poor Adjustment:
Impediments to Recovery

- Anxiety / Catastrophic Emotional Reactions
- Fear of Failure Or Rejection (e.g. damaged goods)
- Loss of Self-confidence and Self-efficacy associated with Residual Impairments
- Excessive Stress (Real & Percieved)
- Fear of Pain (Kinesophobia, Cogniphobia)
- Re-injury / Exacerbation of Injury
- Discrepancies between Personality / Coping Style Behaviors and Injury Consequences
- Anger or Resentment or Perceived Mistreatment
- External (health, pain) Locus of Control

Impediments to Recovery (cont)
- Depression
- Dependency Traits
- Greater reinforcement for "Illness" vs "Wellness"
- Absence of Significant Supportive Other(s)
- Emotional Immaturity/Inadequacy, Poor Coping Skills
- Previous Treatment Failures
- Length/Duration of Complaints
- Vagueness or Inconsistency of Complaints
- Presence of Serious Psychopathology, and, to a lesser degree, a Personality Disorder
- Repressive and Somatization Defenses, including strong Hypochondriacal (e.g., MMPI scale 1) and Hysterical Traits (e.g., MMPI Scale 3)

Impediments (continued)
- Insufficient Residual Coping Resources / Skills
- Disuse Atrophy / Conditioned Nonuse
- Fear of Losing Disability Status, Benefits, Safety Net
- Perceptions of High Compensability for injury
- Preinjury Job (task, work environment) Dissatisfaction
- Collateral Injuries (especially if "silent")
- Inadequate and/or Inaccurate Medical Information
- Mis- or Late-diagnosis and Mis- or Late-Treatment
- Dichotomous (organic vs. psychologic) Conceptualizations of injury and symptoms

Recovery and Response Bias (cont)
- Claims dropped by 28%
- Time to claim settlement was cut by 54%.
- Intensity of neck pain, level of physical functioning, depressive symptoms, having attorney increased claim closure for both
- Conclusion: Compensation for pain and suffering increases frequency, duration of claims, delays recovery
- Note: No-fault system eliminated most court actions, income replacement and medical benefits were increased and medical care became universal, without barriers
  ➤ Pre-injury anxiety was associated with delayed claim closure only under the tort system
- New Conclusion: Removal of financial disincentives and medicolegal associated treatment barriers & anxiety provocation (e.g., treatment barriers) facilitates post-injury recovery.

Recovery and Response Bias
Longitudinal study of PI MVA litigants (Evans, 1994)
- Strongest predictors of successful outcome were
  ➤ Inclusion of psychological services in the Tx plan
  ➤ Receipt of immediate intervention, with return to work (RTW) treatment focus
  ➤ RTW at reduced status or modified duties
  ➤ >= 6 months: uncooperativeness and delayed bill paying of medical insurance carriers (vs. medical symptoms) was most frequently reported stressor.
- Insurance carrier bill payment very strongly predicted RTW
  ➤ Prompt (<=30 days): 97% had returned to work.
  ➤ Delayed (>90 days): 4% had returned to work.
Commonly Elaborated Purposes of Psychotherapy Following Neurologic Insult / Illness

- Improving Coping
- Reducing Stress
- Assisting Adjustment to new capabilities, helping mitigate cognitive, behavioral and personality changes
- Help Cope with Feelings of loss re: decrements in function, status
- Provides a Roadmap for the Future
- Promote Positive Attitude, Set New Goals
- Improving Awareness and Compensation

Commonly Elaborated Advantages of Group Psychotherapy

- Many of the Same Purposes of Individual Therapy, with addition of:
  - Developing Social Skills in a Non-threatening Environment
  - Reducing feelings of Isolation and building a peer-support group.
  - Challenge: For some persons experiencing cognitive, perceptual and social interaction problems, Groups must be handled delicately

Catastrophic Reaction

- Goldstein's term for the extreme depression he observed after left-hemisphere lesions.
- "We have characterized the conditions of brain-injured patients, when faced with solvable and unsolvable tasks, as states of ordered behavior and catastrophic reaction. The [latter] show all the characteristics of anxiety."
- Organism in struggle to cope with the challenges of environment and own body.
- Whole; Cannot be divided into "organs" or "mind" & "body"
- "Disease" = changed state with the environment.
- Healing comes not through "repair" but through adaptation to conditions causing the new state.
**Constraint-Induced Movement Therapy (CIMT): Evidence for Rehabilitation Suppression by Catastrophic Reaction**

- To date, CIMT used effectively for:
  - Upper paralytic/ paretic limb of Chronic, Subacute CVA, TBI, LE CVA, Focal hand dystonia, Phantom limb pain
- Use Dependent Cortical Reorganization
  - Numerous efficacy studis, 5+ TMS, EEG, MEG studies with humans, 2+ studies of monkeys indicate: Cortical reorganization associated with TX effect of CIMT.
- Several Converging Lines of Evidence: Nonuse of a Single Deafferented Limb is a Learned Conditioned Suppression of Movement...efforts to use limb during initial post trauma period are unsuccessful (due to diaschesis, etc.), painful, anxiety and failure inducing and result in Learned Nonuse (cf. Learned Helplessness, Catastrophic Reaction) which persists after cerebral reorganization is possible.
- Mechanism of Action
  - (1) Changing learning contingencies reinforces Use Learning, inhibits Nonuse Learning
  - (2) Sustained, repeated practice of functional arm movements induces expansion of contralateral cortical area controlling movement and recruitment of new ipsilateral areas.

**COPING: Active Vs. Passive**

<table>
<thead>
<tr>
<th>Challenge</th>
<th>Resignation - Depression</th>
</tr>
</thead>
<tbody>
<tr>
<td>Believes in Challenge, Commitment</td>
<td>Believes in Helplessness, Hopelessness</td>
</tr>
<tr>
<td>Positive Identity → Satisfaction with insistence on being an active shaper of the future &amp; finding ways to have a constructive effect (“I Want... → Vision of a more Positive Future!”)</td>
<td>Negative Identity → Dissatisfaction with being a helpless Victim of the past and a powerless compliant who cannot effect the future (“I don’t Want... → Prophecy of Doom!”)</td>
</tr>
<tr>
<td>Goal Attainment Focused - with Specific attention to one situation at a time and searching for solutions one at a time</td>
<td>“Why Me/My Disability” or “Things Aren’t Fair” Focused with Global perception of failures, helplessness/ resentment over losses</td>
</tr>
<tr>
<td>Looks for New Ways to do things &amp; feel satisfied with abilities despite disabilities!</td>
<td>The Old Way or Easy Way or No Way. Like before or not at all!</td>
</tr>
</tbody>
</table>

**More Evidence for Biopsychosocial Effects of Catastrophic Reaction: Traumatic Disability & NEUROSENSITIZATION Syndromes**

(e.g., Miller, 1997; 1998; 1999; 2000)

- Neurosensitization Syndrome (NSS)
  - Syndrome of Subjective Discomfort and Objective Functional Disability
  - Often appears Excessive in Duration and Severity (vs. initiating event)
  - May be Resistant to Conventional Medical and Psychological interventions
  - Hypothesized to Develop from Progressively Enhanced Sensitivity / Reactivity of CNS mechanisms

**Traumatic Disability & NEUROSENSITIZATION Syndromes**

(Miller, 1997; 1998; 1999; 2000)

- Frequently Comorbid and Treatment Refractory Syndromes
  - Post Concussion Syndrome
  - Post Traumatic Stress Disorder
  - Chronic Pain
  - Depression
  - Multiple Chemical Sensitivity
  - Anxiety
Effect of Repeated Stimulation on CNS

- Kindling vs. Habituation
  - Habituation: continuous or short interval stimulation effect
  - Kindling: extended interval subthreshold stimulation summating as seizure, with permanent changes in CNS excitability resulting in susceptibility to intermittent stress, and spontaneity (amygdala)

Traumatic Disability & NEUROSENSITIZATION Syndromes
(Miller, 1997; 1998; 1999; 2000)

Depression:
- Stressors related to separation, loss, and devalued self esteem associated with depression onset following traumatic disability can pathophysiologically trigger repeated depressive episodes with each successive failure, frustration or disappointment (cf. Paykel, 1994)
- Neurobiological encoding can produce heightened vulnerability to subsequent recurrences with lessening degrees of psychosocial stress

Chronic Pain:
- Activation of closed neural circuits in the limbic system (e.g., cingulum bundle, fornix, anterior thalamic nuclei, cingulate cortex, hippocampus, mammillary bodies and back to the anterior thalamic nuclei or somatosensory thalamus) during initial exposure to painful stimulation induces a sensitized state within the limbic system, enhancing responses to subsequent stimuli.

Post Traumatic Stress Disorder:
- Sensitization by fear associated with traumatic stress produces excitability changes in amygdaloid neurons, in turn influencing a variety of limbic and brainstem structures involved in the somatic and autonomic expression of fear and anxiety (e.g., reduced activation threshold of locus coeruleus resulting in increased norepinephrine output; elevated medocortical dopaminergic neuron activation).
NEUROSENSITIZATION Syndromes: Treatment Implications
(Miller, 1997; 1998; 1999; 2000)

- Conceptualization of interaction based on a pattern of maladaptive positive feedback that eventuates in a pathological outcome based on neuroplasticity at, at least the following:
  - Neuropsychological: cortical perceptual-evaluative vs. Limbic emotional-reactive
  - Neurophysiological: synaptic reorganization or kindling, and electrophysiologic sensitization
  - Molecular-genetic: alterations in intracellular third messenger systems leading to longer-term changes in neuronal functioning, including in experience and behavior.

References

Resolving the Persistent Catastrophic Reaction

- Confront deficits:
  - Without being Overwhelmed by distress
  - With a Conceptual Framework and Rehab Methodology that Bolsters and Supports and offers Hope Through Conceptually and Through Graduated Successes
  - With a Calmer CNS and Decreasing Catastrophic Reactions (emotional, cognitive, neurophysiologic) that would block optimal recovery
Multiple cognitive, emotional, physical & social sequelae of TBI constitute, singularly and in combination, severe stressors which both challenge coping capabilities & directly diminish available coping resources through loss of abilities, independence, self esteem and identity, financial & social supports.

Carefully evaluating perceived stress, perceived resources, and emotional responses, provides an intuitively appealing, understandable model for organizing rehabilitation efforts. May be useful in directing rehabilitation professionals toward appropriate recommendations and treatment targets.

Guiding Consideration: Balancing Perceived Stress with internal & external Coping Resources.

Recovery After Injury

...and Adaptation to Impairment

It’s The Coping...

(Biopsychosocial)

M.F. Martelli, Ph.D.: 1999
Habit Retraining Model for ABI: (continued)

- The greatest obstacle to learning or relearning is the redirection of energy away from goal directed activity and toward debilitating emotion and activity.
- The most frequent Rehab Energy Reserve Poisons (Re-Learning Blocks) include:
  - Fear / Anxiety, Persistent Catastrophic Emotional Reactions (usually subterranean), Anger and Resentment, Feelings of Victimization, and inertia
- Rehabilitation Requires Removal of Blocks

Holistic Habit Rehabilitation

**Ingredients: The 3 P's**

- **Plan:** A strategy or design for stepwise progress toward a desired outcome. Most plans are based on task analyses, or breaking seemingly complex tasks down into simple component steps, and proceeding in a list wise fashion. Clearly, the more specific, concrete, and obvious, the more likely the plan will work.
- **Practice:** Repetition is the cement for learning which makes complex and cumbersome and boring tasks more automatic and effortless. With practice and repetition, even complex tasks become automatic and habitual. That is, a habit, or automatic robots, performs the tasks for us without special effort, energy, concentration, memory, and so on.
- **Promoting Attitude:** A facilitative attitude provides the motivation that fuels persistence & mobilization of energy necessary for accomplishment of a progressive series of desirable but challenging goals.
Task Analysis: The Building Block of LEARNing

- **TA**: breaking a task into single, logically sequenced steps & recording in a Checklist and then checking off each step as it is completed.
- **TA's** always make task initiation, completion & follow through much easier...greatly improve performance despite limitations in memory, attention, energy, initiative, ability to sustain performance, organization...any other difficulty.
- **TA's** reduce demand and energy consumed by reasoning and problem solving associated with planning, organizing & having to recall, make decisions & prioritize appropriate steps and sequences for both basic and complex tasks.
- **TA's** (**re**)establish efficient habit routines that make up normal everyday activity. 30 to 1000 consistent repetitions produce automatic habits.
- **Ingredients** for (re)building automatic habits are the **3 P's** Plan, Practice, Promoting Attitude. The result is (re)habilitation, or increased efficiency accomplished by removing obstacles to independence.

---

**Rehab Commandment #4**

**Rehabilitation Imperative**

- **First - Want** to Improve
- **Second - Believe** that You Can Improve
- **Third - Set a Series of Gradual, Incremental Goals** so that You Can Improve in small steps!

*You can only Get Better If... You want to get better more than you want anything else*
Essential Commandments of Counseling & Psychotherapy

- I. Do No Harm
- II. Know Your Biases, Correct for Them
- III. Learn the Best, Know the Best, But Then Discard It While Meeting Client
- IV. Relationship Rules (‘is the Ruler’)
- V. Shaping, Shaping, Shaping
- IV. Do Not Commit Amateur Therapist Mistakes

Essential Commandments:
I. Do No Harm

- Haphazard Therapy - May cause Negative Expectancies, Prevent or Undermine Future Treatment
- Premature Confrontation - e.g., Substance Abuse - Confrontation can remove needed social support from confronters; Removal of Alcohol in absence of replacement coping mechanisms can cause serious decompensation
- Intervention (incl. Information) X Coping Style Mismatches (cf example on subsequent slide)
- Imposing Traditional Psychotherapy Models
  - Prigatano (1999) 10th Principle of NP Rehab: "failure to ID which patients can and cannot be helped by different approaches creates a lack of credibility for the field"

Essential Commandments: I. Do No Harm: Confronting Unawareness

- Often Necessary first step, but Not Always
- In at least Some Situations it is Harmful (e.g., "Individuals ...more severe organic deficits and/or psychologically fragile...might experience overwhelming distress when their customary defenses are disabled.")
- Limited Cognitive skills may Block increased awareness or compensation
- Can be much easier to change behaviors first
- Simplifying expectations, rewarding desirable alternative behaviors until habitual, may be a more effective alternative
Essential Commandments:
VI. Amateur Mistakes
× Imposing a strategy that doesn’t fit
× Mismatching counseling style with client style and needs
× Neglecting to first develop the Relationship
× Not differentiating client need for ventilation or validation or empathy versus active treatment solution, problem solving, rescue, etc.
× Blaming the patient instead of the therapist relationship, therapeutic plan or process, or therapist skills, for failures

Powerful Psychotherapy Interventions
- Relaxation Procedures, Biofeedback, Hypnosis
- Cog Beh Analysis System of Psychotherapy
- Desensitization Procedures
- Shaping
- Behavioral Programming
- Schwartz (1996) 4-Step OCD TX Method
- Holistic Habit Retraining & Practical Adaptations
- Combination Interventions
- Network Therapy
- Group / Family Therapy

V. Amateur Mistakes (cont)
× Failing to Conceptually Convert Maladaptive, Ineffective, Undesirable Behaviors to Alternative, Effective Behavioral Replacements
× Failing to Make Shaping of Desirable Replacement Behaviors the Primary Therapeutic Focus
× Failing to Bolster & Provide Structures to Support Learning via Compensating for Necessary Cognition and Motivation Deficits
× Therapist Learned Helplessness

The Behavior Management Imperative: Replace Negative Reinforcement (the "Stick") with Shaping (the "Carrot")

<table>
<thead>
<tr>
<th>Negative Reinforcement &quot;The Stick&quot;</th>
<th>Shaping &quot;The Carrot&quot;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Believes that human nature is basically bad and that bad must be guarded against and kept in check.</td>
<td>Believes that human nature is neutral and that good and bad are learned. Good can be taught, nurtured and cultivated</td>
</tr>
<tr>
<td>*&quot;Bad&quot; Focused. Avoiding Bad is Good &amp; the Absence of Bad is Good. Focus is with Avoiding and Preventing Bad Behaviors and Negative Behaviors, *&quot;I don't want&quot;...something Negative</td>
<td>*&quot;Good&quot; Focused. Good is Good, which Prevents Bad. Focus is with a Driving/Goal Directed Vision of Making Desirable Changes and a Positive Future, *&quot;I want&quot;...something Positive</td>
</tr>
<tr>
<td>*A Self-Fulfilling Prophecy of Bad! Uses &quot;Should, Ought, Must, Shouldn't, Mustn't&quot;, Frowns, Nods, etc. Leads to --&gt; Anxiety, Distress, Pessimism &amp; Negative Identity</td>
<td>*A Self-Fulfilling Prophecy of Good! Uses &quot;In Your/Their Best Interest... Not in... Best Interest&quot;, Smiles, Pats, etc. Leads to --&gt; Confidence, Optimism, Hope &amp; Positive Identity, in My / Their / Our Best Interest</td>
</tr>
<tr>
<td>Uses Distress / Punishment to Decrease and Prevent Undesirable (Bad) Behavior and Uses Anxiety, Fear, Distress &amp; Guilt Until the Bad Behaviors Stop and Good Ones Begin</td>
<td>Uses Rewards to Increase Desirable (Good) Behavior Rewards &amp; Praises approximations of Good/Desirable Behavior that are present, and Gradually and Successively Shapes Increases in Desirable Behavior Until Achieved</td>
</tr>
</tbody>
</table>
**Shaping via Reinforcement of Successive Approximations of Desired Behavior:**

This involves successively rewarding the smallest movements (baby steps) in the desired direction with carrots (i.e., verbal rewards, expressions of approval & appreciation, smiles & nonverbal gestures of approval, physical/tangible rewards, jumping up with joy, etc.)

Each successful small step is rewarded, which teaches feeling good about being good.

---

**CogBehavior Analysis System PsychoTx (CBASP) Components**

**Happened:** Event: newspaper reporter account, minus interpretation, reaction, emotion, inference...Just the Facts

**Meant:** Significance: What makes it good or bad, and why? Relevance, from the individual's phenomenologic perspective and vantage point

**Felt:** Emotions, affective reactions (not thoughts) ...abandoned, demeaned, unappreciated, resentful, angry, irate, like: hands caught in cookie jar, dog just died, mother yelled at me when I was little, etc.

**Did:** Actual overt, but also covert responses. e.g.: did nothing, or yelled, or told him to F*$% off, or said okay, etc., etc., etc.

**Wanted:** Desired situation outcome. e.g.: wanted him to compliment my work, at least not criticize it...wanted her to pay attention to what I was saying... him to apologize and promise not to do it again....

**Turned Out:** What actually happened. e.g.: nothing, or something bad or unwanted, etc., or a violent explosion with negative consequences, etc.

**Evaluation:** How close did it turn out vs wanted (See G.A.S.)

---

**CogBehav Analysis System PsychoTherapy (CBASP)**

**Clinical Model:**

- Learn Thematic Patterns of Maladaptive Functional Contributions to Undesirable Situational Outcomes and Ineffective Patterns in Relationships and Living --> Distressful Emotion, Negative Mood States, General Maladaptation, Unhappiness, and specific to general life Dissatisfaction.

- **RX_1. Analysis of Functional Contributions at each level**

- **RX_2. Specific Remedial Interventions**

  - **Happened_RX:** When relevant, changing poor situation selection habits and poor situation involvements.
  - **Meant_RX:** Challenging Cognitive Distortions or Inflexible and Distorted Interpretive Patterns (overgeneralization and the other cognitive distortions; e.g., Ellis's 11 irrational idea, Martelli et al's Therapist and Patient Ideas (to make you distured or help you function); Specification of the Global, hard to challenge, to the Specific and testable.

---

**CogBehAnalysisSystemPsychoTx (CBASP)**

- **Felt_RX:** Remediation of Emotion Modulation Problems; Relaxation Training and Protocols; Assertiveness, Distraction, etc.

- **Did_RX:** Training in Skill deficit areas (assertiveness, anger control, etc.) or self efficacy

- **Wanted_RX:** Remediation of Poor need formulation and problem solving; Goal Attainment Scaling

- **Got_RX:** The formula for effective functioning and mental health is Good approximations of Getting 'What You Want'. In CBASP, therapy always begins with: 1) phenomenal Mismatches; 2) Absence of Recognition of functional contributions to situations, and; 3) Powerlessness to effect outcome or produce desirable situational outcomes. Therapy ends (good outcome) when homework Stress Survey Q's all Produce good semblance of Desired Outcome.

---

Situational Analysis (CBASP cont.)

- Detailing a Stress Situation in order to personally Control/Shape Behavior to Maximize Chances for a Desired Outcome:
  - (a) Analyze situation
  - (b) Problem-solve potential actions
  - (c) Implement plan most likely to be successful

INSTRUCTION

- Think of Past Stressful Situations, Role-play likely Future Ones
- Answer the following set of Questions:
  - (1) What happened (who, what, when, where),
  - (2) What were your thoughts, feelings, and actions at the time
  - (3) What was the actual outcome
  - (4) What was the desired outcome
  - (5) What response (thoughts and actions) would have been more adaptive?
    What response is more likely to get you what you want? RX:

Devising a standard list of adaptive thoughts to refute maladaptive ones

CBASP (cont)

- Situational Analysis (cont)

- Example Problem Scenarios:
  - Coworker says: I don't see why YOU should get special privileges. You're just pretending you can't do it to get advantages...
  - How do you Feel?
  - What would you like to get out of this situation (Want)?
  - How do you react (Do) in order to get what you want from this situation?

Graduated Exposure Programs in Rehabilitation

- Exposure to distressful emotional, physiological and sensory reaction situations
- Incremental increases in tolerance (and incremental compensatory learning, anxiety extinction, sensory interpretation distress) without experiencing significant anxiety or sensory distress.
- Requires person Not experience distressful reactions or experiences.
- Examples: anxieties, phobias & distressful emotions and sensory reactions related to the following:
  - Noise and/or light (when not mediated by headaches, etc.)
  - Crowds and public places (e.g., stores, malls, sporting events)
  - Overwhelming visual stimulation and patterns
  - Driving (especially in traffic)

METHOD: Schedule Gradually Increased Exposure / Assigned Activities, Incremented in Time and/or Distance and/or Intensity that are followed Exactly

NeuroBehavioral Regulation:

Adaptive Habit Retraining Strategies
Derived From Task Analyses

M.F. Martelli, Ph.D.: 1999

Graduated Exposure Programs
Exposure to distressful emotional, physiological and sensory reaction situations
Incremental increases in tolerance (and incremental compensatory learning, anxiety extinction, sensory interpretation distress) without experiencing significant anxiety or sensory distress.
Requires person Not experience distressful reactions or experiences.
Examples: anxieties, phobias & distressful emotions and sensory reactions related to the following:
- Noise and/or light (when not mediated by headaches, etc.)
- Crowds and public places (e.g., stores, malls, sporting events)
- Overwhelming visual stimulation and patterns
- Driving (especially in traffic)
METHOD: Schedule Gradually Increased Exposure / Assigned Activities, Incremented in Time and/or Distance and/or Intensity that are followed Exactly

**Sample Rationale:** "Like Breaking a Bronco, you can’t learn to ride until you can get in the saddle. You can't get in the saddle until the horse believes it won’t die if something gets on its back. Similarly, You can't increase your tolerance for (sounds, etc.) unless your system learns that it can tolerate some level of that (noise, etc.) without great (distress, pain, fatigue, etc.)."

---

**LT's Graduated Exposure Driving Program**

*Monday (3/23)*
Drive from home around 6:00pm to Chamberlayne Avenue and follow to Broad Street to Mid Town Auto Sales, look at cars for 10 minutes, and return home.

*Tuesday*
Drive from home around 6:00pm to Chamberlayne Avenue and follow to Broad Street to Bailey’s Auto Sales, look at cars for 15 minutes, and return home.

*Wednesday*
Drive from home to technical center while mom is in back seat around 6pm, drive from center to home around 9:30pm with mom in back seat.

*Saturday (3/28)*
Drive from home around 6:00pm to Chamberlayne Avenue and follow to Broad Street to the Mid Town Auto Sales, look at cars for 10 minutes, drive to Bailey’s and look at cars for 10 minutes, drive to any other car lot on Broad Street and return home.

*Thursday (4/3)*
Drive from home around 5:00pm to Byrd Park, circle through, head to Broad St. to Mid Town Auto Sales, then to Bailey’s, then to a lot on the South Side and then return home.

*Friday (4/4)*
Return at 5:00pm to Sheltering Arms. Drive self. After leaving, head to Byrd Park, circle through it, then head to Broad Street to the Mid Town Auto Sales, then head to Bailey’s, then to a lot on the South Side, and then return home.

---

**Increasing Self-Confidence: Graduated Successes**
*(Decreasing Self-Consciousness, Anxiety, Low Self-Esteem, etc.)*

- **Graduated Success Shaping**
  - Noncomplex tasks, successfully completeable
  - Gradual increases in complexity (challenge) following successes
  - Diminishing Cues / Errorless Learning
  - Increasing Accuracy of: a) Self-Monitoring; b) Self-Evaluation and c) Self-Reinforcement (self-delivered praise, etc.)

- **Progress gauged through progression from:**
  - Initial stages: Maximal, Diminishing Cues, Errorless Performance & accurate self-monitoring, self-evaluation & self-reinforcement
  - Middle stages: increasing internal cueing & decreasing need for external assistance for task completion, accurate self-monitoring, self-evaluation & self-reinforcement, to
  - Later stages: independent task completion and independently conducted accurate self-monitoring, self-evaluation & effective self-reinforcement
  - Subsequent introduction of slightly more challenging tasks and reintroduction of the above noted process of maximum to gradually diminishing cues (method of diminishing cues)
Protocol for Increasing Self-Confidence
(Decreasing Self-Consciousness, Anxiety, Low Self-Esteem, etc.)

<table>
<thead>

- Subsequent introduction of slightly more challenging tasks and reintroduction of the above noted process of maximum to gradually diminishing cues (method of diminishing cues)

Self-Regulator for Involuntary Sadness!

1 - Re-Label...It's Not an Intended, or Legitimate Degree of Emotion...It's Involuntary Sadness!
2 - Re-Interpret...It's just Involuntary and Unintentional Sadness in which nerves connecting the brain's emotional experience centers to emotional expression muscles are weakened - resulting in decreased control & exaggerated release of emotion!
3 - Re-Focus...Concentrate on something different, or pleasurable or funny, to distract myself and & restore control of expression ("Plop, Plop, Fizz, Fizz..."))
4 - Re-Evaluate...Decide that the involuntary sadness or teariness is illegitimate and False Information. Decide to Dismiss This Information and Restore Control through re-focusing attention! Re-LIFE it!

Re-LIFE it!

Mission Impossible
Assignment

Your Mission, should you decide to accept it:
- Look for Opportunities to Build Stability By Practicing Emotional De-escalation / Self-Control Strategies
- Practice Both:
  - (A) Preventing Temporal Lobe Based Emotional Hyper-intensification (i.e., use Emotional Well-Being Habit to prevent "kindling" of electro-emotion)
  - (B) De-escalating "kindled" Emotion via Re-Interpreting it as electrical buildup trying to replicate itself by using your emotions against you to fuel more electricity!

Freedom is Worth The Effort!
EMOTION CONTROL HEADQUARTERS

HOMEWORK

- Look for Opportunities to Think Suspicious Thoughts, Think Someone is Screwing You, and Get Angry, and then:
  - Practice re-interpreting them in a harmless, non-threatening, non-angering way!
  - Practice Saying "So What", "Who Cares" and "Who Says"
  - And, Remember the Stress Buster Rules:
    - Rule#1: Don't Sweat the Little Stuff!
    - Rule#2: It's All Little Stiff!
    (it's just that your injury makes it seem bigger than it really is!)

Chris's Mission Impossible

HOMEWORK

Your Mission, Should you decide to accept it:

- Look for Opportunities to Feel Urgency Or Need for Immediate Fulfillment and Convert it to Strategic Under-Reaction
  - Practice Countering Urgency via the Stress Buster Rules
  - Practice Building up Tolerance to Need/ Stress Frustration (i.e., Become More Stress Resistant, More Under-Reactive, and More Strategic)
  - Remind Yourself that Strategic Behavior is the Key to Influencing Important People (e.g. Dad) and Desirable Persons (e.g., girlfriends)

Rehab N Pacing Imperative

* cf.: Vestibular Overload

- Neurogenic Fatigue

- Remember to Leave Enough Reserve Energy For Brain Recovery, Strengthening & Building of Resilience/Increased Capacity in Brain Cells....
- ....If You Go as far as Tolerance or Energy Will Let You (i.e., until fatigued and/or sick), you will Not Allow Continued Recovery and Brain Strengthening (...instead, energy will go toward recovery from sickness, which only returns you to where you were...without progressing!)

Pace it...Don’t Race it!
Progress is a series of small Steps...Celebrate each one patiently!

AJAX Strategies...Cognitive Cleaning Detergent!

... Stronger than Neurobehavioral Dirt!

Derived From Task Analyses... Designed to Counter Cognitive Obstacles

Read (& Answer your Questions)
Recite (Main Points)
Review (and Rehearse)

Organization Imperative

Bottom Line
- Short, succinct, to the point...
- ...MAIN POINT...BOTTOM LINE!
- ...Give OUTLINE of BOTTOM LINE BEFORE elaborating DETAILS

One Thing at a Time
- STAY FOCUSED on One Thing at a Time & INHIBIT WANDERING
- Monitor Ongoing Activities & Conversations & Demonstrate Ability to TRACK
- Use Multi-Tasking Monitor to Keep Track of other Things

*Derived from Task Analysis
Multi-Tasking Monitor

Task 1:
Left Off:

Task 2:
Left Off:

Task 3:
Left Off:

Task 4:
Left Off:

Transfer incompletes to next day

TO DO List
1. 6.
2. 7.
3. 8.
4. 9.
5. 10.

Multitasking Monitor

(continued)

Jim’s Executive Self-Control Habit: sober

Every day, and every Two Hours, to make it a habit:

(1) Rate your Current Impulsiveness and Executive Status!

Have you been scattered (Been on more than one task or idea or topic at a time) in the last 2 hours?

Have you been an open book (i.e., Talking about You, Your Concerns, Your Life Story...Talking Like a Russian Novelist; Disclosing Too Much, Too Quickly...)

Have you felt excited in any manner in the last two hours?

Have your Thoughts or Speech raced in the last two hours? (or are they Now - Don’t underestimate)

(2) Adjust your Daily Activities Accordingly!

If You Have Some Vulnerability (‘Yes’ to 1 question, or unsure) to Dysexecutive symptoms,
Engage in Some Executive Renewing Activities and Closely Monitor and Reduce Executive Taxing Activities

If You Have High Vulnerability (‘Yes’ to 2 or more) to Dysexecutive symptoms, Reduce all Executive Taxing Activities (that is, do few, pace and go very slowly) and Engage Mostly or Only in Executive Renewing Activities

Activity Effects on Executive Skills

Executive Renewing Activities

Executive Taxing Activities

Pace / Slow / 1 Thing at a Time
Planning/Organization
Relaxation / Power Nap
Q Reflex/ Deep Breathing
Swimming / Moderate Exercise
Music/Guitar/Singing Reading

Overactivity
Stimulating Situations
Stress & Worry/ Rumination
Working
Walking / Prolonged Standing
Meeting New Persons / esp. Women

Piloting: Internal Self-Monitor

ANTICIPATION

How will/does this look to others, WORST CRITIC?

Will it help or hurt to turn out the way I want?

BRAKE ON ALL RED FLAGS

Perceptions of Inequality, Unfairness, Mistreatment

Perceptions of "Stupidity" in others

Perceptions of Being Ridiculed

Feeling Lonely or Horney

Anger / Frustration / Excitement

COMPENSATION

Inner Running Dialogue with constant Red Flag review

Practice inhibiting and braking responses during all Red Flags!
Tom's Rules of the Road for Successful Relationships

- **Brake on Touching**, Getting Closer than Two Feet of a Woman Until After a Second Formal Date (Date means going out with MUTUALLY agreed upon possibility of becoming a relationship - boyfriend/girlfriend combo).
- **Brake on Expressing Strong Emotions** (affection, like, etc.) With Any Woman Until After a Second, Formal Date (using word 'love' in any context is proscribed until after 3 mos of formal dating!)
- **Brake on Hugging** of anyone other Than a Relative or Girlfriend (i.e. someone you have dated more than two times who wants to continue dating you)
- **If Slow Dancing**, No Touching within 6 inches of Butt, Crotch, or Breasts, Until After a Second Date.
- **Always Maintain your Personal Space** (2 ft.) around Women
- **Always Attend by Looking** (at face), Being Interested in What A Woman Says, and Keep Your Talking to a Minimum
- **Work on Coming Across Gently** (Vs. Usually Intense or Like a Ton of Bricks!)

Tom's (Babe) Magnetism Formula

1. **CLEAN APARTMENT:**
   - **KITCHEN**
     - Clean countertops daily
     - Sweep floor daily
     - Organize cabinets & wipe off ice box
     - Every Weds mop floor & wipe walls
   - **BEDROOM**
     - Fold clothes or hang them up and store where appropriate. Daily
     - Sweep and vacuum floors when appropriate or prn
     - Organize computer Area
     - Empty cat box daily
     - Mop floors when appropriate prn
   - **DEN**
     - Sweep floor
     - Vacuum daily

- **Softer Voice**
- **Less Talking,**
- **Less Inflection**
- **Less Movement, Hand Talk**
- **RX: Plan a Test / Challenge Situation for Putting on the Brakes**
- **Self-Reward for "Putting on the Brakes"**
- **Accomplishments (& ID'ng Opportunities for Practice)**
The Rehabilitation Progress Imperative

Attack Incremental Rehab Goals, One Tiny Step at a Time! Remember, the Quality of Your Life Depends on it!

Do Nothing HALF-BUTT! That is, use strategies or do things half way, and then say "but..." *

*But I used to could. But I didn’t use to have to...

But it’s hard... But he said... But they don’t understand...

...But, What If...?

But my Butt hurts (from excessive butting)!

P.S. Every Butt Leads to...

Crap!

Life Satisfaction and Self Esteem Protocol:
Instructions

1. Complete Life Analysis Form (i.e., follow instructions to rate each area, Love, Work and Play, according to your current satisfaction level from 0 or couldn’t be worse, to 10, or couldn’t be better) to get a baseline starting point for comparison farther down the road, as you work toward and make progress in each area.

2. Complete Life Satisfaction & Self Esteem Form Ratings (i.e., follow instructions to rate each goal area according to your current satisfaction, from 0 to 10; when completed, divide the total score by the number of goals, to get your "Self Satisfaction") to get a baseline starting point for comparison farther down the road, as you work toward and make progress in each area.

3. Continue working on identifying strategies and objectives to work toward Each Goal on your Master Life Organizer Task List. On the small calendar on page 1, please mark with a checkmark for any day for which work is done toward a goal (if more than once in that day, put more than one check).

Procedure

1- Rate each Domain (Love, Work, Play) From 0 (Nothing, Zilch) Through 5 (Mixed) to 10 (Couldn’t be better; Ideal)

2- Interpret Data:

1. Overall Score is 15 or Less, or if Score for either of your two highest categories is less than 6, then action is needed!

2. As needed, Employ the Rehab Imperative #4:

First - Want to Be More Satisfied
Second - Believe that You Can Be More Satisfied
Third - Set a Series of Gradual, Incremental Goals so that You Can Increase Satisfaction in Small Steps!
Dena's Life Satisfaction & Self-Esteem

1) Devise a list of important Life Areas
2) Rate Satisfaction in each area (0=None; 10=Ideal)
3) Add Area Satisfaction Score. Divide by 8 for "Average Life Satisfaction"
4) Complete Goal Attainment Scales (GAS) with steps for Increasing Satisfaction in each Life Area
5) Devise Plans for Moving Toward a More Desirable Future & Improving Status in relevant Life Areas. Focus on one area at a time and small steps in each area (use Life Task Organizer)

Patience/Pacing Habit

Comfort with Limitations

Self Control

Anger/Anxiety

Boundaries/Assertiveness

Physical Endurance/Strength

Leisure/Fun

Career

Prescription for Achieving a Stable and Satisfactory Self / Identity

Bob's Life Satisfaction & Self-Esteem

1) Devise a list of important Life Areas
2) Rate Satisfaction in each area (0=None; 10=Ideal)
3) Add Area Satisfaction Score. Divide by 8 for "Average Life Satisfaction"
4) Complete Goal Attainment Scales (GAS) with steps for Increasing Satisfaction in each Life Area
5) Devise Plans for Moving Toward a More Desirable Future & Improving Status in relevant Life Areas. Focus on one area at a time and small steps in each area (use Life Task Organizer)

**Therapist (&Caregiver) Survival Rules**

- **Burnout Prophylaxis**
- **Learn how / become comfortable Asking for / Enlistin Help from Others**
- **Ensure some of the therapist-client interaction includes interactions in client’s areas of residual strengths and competencies and enjoyments.**
- **Practice "Mirroring" vs "Sponging"**
- **Contract with each other to allow mistakes in the beginning and in crises...and not to Blame 'Rules of Crisis' can help...**
**Rules of Crisis**

- Everyone will be at their worst!
- Our/Their behavior and communication will reflect our/their worst!
- We/They will hold others accountable and excuse ourselves/themselves!
- When we are hurting, we fail to appreciate other's hurt!
- Things will get better or worse after a crisis, but will not stay the same!

---

**Conclusions**

Holist Habit Rehabilitation (HHR) offers a Model & Methodology of Neurorehabilitation that:

- Integrates psychotherapy as necessary to the Rehab Process
- Reduces the complexity of psychotherapy
- Simplifies the combined processes of accomplishing goals of psychotherapy and rehabilitation, and simplifies the methods

HHR Methodology Issues from:

- (a) the "automatic learning" and "errorless learning" and skills relearning after TBI literature;
- (b) Task analytic method for designing skills retraining strategies
- (c) Analysis of developmental, characterologic, organic and situational obstacles as part of strategy design and utilization
- (d) Generation of techniques for promoting rehabilitative strategy use: i) adapting techniques to fit individual inherent & naturalistic reinforcers; ii) highlighting relationships to functional goals; iii) utilization of social networks; iv) use of individualized posters for simple & appealing ("catchy") cognitive and attitudinal procedures

---

**THE END**

That's all Folks!!
