

SDS Activity in Your Home

We all have different answers and personal preferences regarding the cleanliness of our homes and surroundings. The many types and brands of cleaning products available on store shelves is staggering. In most cases, when we choose a cleaning product, we are primarily concerned with whether or not it will do the job, going on the assumption that if a product is sold in the grocery store, it must be safe for use in our homes. Household cleaning chemicals, like tens of thousands of chemicals found in the consumer marketplace, are available to the consumer with virtually no information on the potential consequences for human health and little oversight by the government.

In this assignment you will explore two household cleaning products found in your home. Each products lists the ingredients found in that product. Your assignment is to fill in the report form at the bottom of the page and print out from the internet an SDS (Safety Data Sheet) for one of the ingredients on each of the cleaning products.
