

Snagit Screen Capture

I choose to download Snagit Screen Capture software. This software allows you to capture images from your screen just as you see it. You can capture the entire screen, a web page or even part of a webpage and input into documents or emails.

I was able to use this program to capture the webpage of the program information. I downloaded it from the following website:

Here is a screen capture of the scrolling window for Snagit. This is a great program with great features.

What You Can Do With Snagit

On the Web or on your desktop, there are thousands of ways Snagit can add speed, creativity and ease to your everyday tasks.

Share Visually by E-Mail

Capture exactly what you see on your screen – an image, an article, part of a Web page, or even the contents of a scrolling window. Then, let Snagit embed the capture

directly into the body of an e-mail message, and send it to a colleague, technical support, or even your best friend.

Add Interactivity to your Captures and Presentations

Snagit's Editor gives you the power of Flash interactivity in an easy-to-use tool. Add clickable links or pop-up text/graphics to a capture. Then, paste the capture into a PowerPoint slide to add an extra level of information. Or, capture a Web page with all of the embedded links intact. Then, click a link to go directly online from your presentation.

Give Your Presentations More Visual Impact

Add company logos and branding elements to your PowerPoint presentations to give them a custom, professional look. Effortlessly embed Flash (.swf) videos into slides, and bring your presentations to life.

Instruct Others With Quick "How-To" Illustrations

Capture any part of any application that runs on your PC. Then, use arrows, captions, stamps, cursors or text callouts to illustrate the steps or concepts.
